Summary

Software Engineering undergraduate with a primary focus on Site Reliability Engineering (SRE) and Cloud Infrastructure. During my internship at WSO2, I owned the modernization of incident management infrastructure across multi-cloud platforms (AWS, Azure), achieving significant cost reductions and improving system observability. I am passionate about building resilient, automated systems and have deep hands-on experience with Kubernetes, Terraform, and Go-based backend services.

Work Experience

WSO2 LLC

DevOps / Site Reliability Engineering Intern
Colombo, Sri Lanka | Sep. 2025 - Feb. 2026

- Contributed to a major project to revamp the incident and alert notification process across cloud platforms including Azure, AWS, Site24x7, and Prometheus.
- Led the migration from PagerDuty to ServiceNow native capabilities, implementing custom features aligned with team requirements and achieving significant PagerDuty cost reduction.
- Automated service incident creation and optimized alerting workflows, improving response times and reducing alert fatigue for on-call engineers.
- Gained hands-on experience with WSO2 products (API Manager, Choreo, Asgardeo) while supporting SRE functions focused on incident management, cloud monitoring, and observability.

Education

Sri Lanka Institute of Information Technology (SLIIT)

BSc (Hons) in Information Technology (Specializing in Software Engineering)
Sri Lanka | Nov. 2022 – Nov. 2026 (Expected)

- Current GPA: 3.51

Projects

CraveDrop

Food Ordering Microservices Platform
SLIIT | Jan. 2025 - May 2025

- Built a Kubernetes-based microservices backend for restaurant order management using RabbitMQ for messaging.
- Technologies: Kubernetes, Docker, PostgreSQL, RabbitMQ

Semantic-Search

Semantic Book Search API
Personal Project | Jul. 2025 - Aug. 2025

- Built a Golang-based semantic search API for books using vector embeddings with Gemini API and PostgreSQL pgvector extension.
- Technologies: Go, PostgreSQL, pgvector, Gemini API, Echo, Docker, Text Embedding

KinD-Cluster-Terraform

Automated Local Kubernetes Infrastructure
Personal Project | Aug. 2025 - Present

- Architected and implemented a modular Terraform configuration to automate the provisioning of local Kubernetes (KinD) clusters.
- Enabled cloud-native networking locally by integrating cloud-provider-kind for native Ingress and LoadBalancer support.
- Technologies: Terraform, Kubernetes (KinD), Docker, TFLint

FarmCart

E-Commerce Platform

SLIIT | Jun. 2024 - Nov. 2024

- Built a scalable shopping platform connecting farmers and consumers with containerized CI/CD pipelines.
- Technologies: React, Tailwind CSS, MongoDB, Docker, GitHub Actions

Snipbox

Code Snippet Manager

Personal Project | Sep. 2024 - Dec. 2024

- Implemented Docker-based hot reload with a secure production-ready build supporting MySQL and TLS.
- Technologies: Go, REST API, MySQL

SRE Homelab & Learning Projects

Infrastructure as Code & Lab Environments

Personal Projects | Ongoing

- **Kubernetes Homelab** — Implemented multi-node cluster deployments with custom networking and storage configurations.
- **Ansible Automation** — Developed reusable roles for automated server hardening and infrastructure provisioning.
- **Cloud IaC** — Automated AWS/DigitalOcean resource management using Terraform modular architecture.

Courses and Certifications

CKA Certification Course - Certified Kubernetes Administrator | KodeKloud | 2025

Ansible Advanced Course | KodeKloud | 2025

Kubernetes and Cloud-Native Associate (KCNA) | KodeKloud | 2025

Advanced Bash Scripting | KodeKloud | 2025

Skills

Back-end: Go (Golang), Node.js, Express.js, Java, SpringBoot, REST API, gRPC, PostgreSQL, MongoDB, Redis, RabbitMQ

Front-end: React, Tailwind CSS, JavaScript, HTML, CSS

DevOps & Cloud: AWS, Docker, Kubernetes, Terraform, Ansible, GitHub Actions, Linux, Bash
